16A Midterm 1 Statistics (001)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 102/125. This means that 30% of the class received 102 or above. The 50th percentile is where the median is, so exactly half the class scored 87 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	123	
90th Percentile	118	
85th Percentile	114	
80th Percentile	110	
75th Percentile	105	
70th Percentile	102	
65th Percentile	99	
60th Percentile	94	A-/B+ Boundary
55th Percentile	91	
50th Percentile	87	
45th Percentile	82	
40th Percentile	77	
35th Percentile	75	
30th Percentile	70	B-/C+ Boundary
25th Percentile	63	
20th Percentile	56	
15th Percentile	51	C-/D+ Boundary
10th Percentile	45	
5th Percentile	35.5	
0th Percentile	0
