16A Midterm 1 Statistics (002)

Here are the basic statistics from the first midterm. The table shows the scores at each percentile boundary. For example the 70th percentile is 99/125. This means that 30% of the class received 99 or above. The 50th percentile is where the median is, so exactly half the class scored 89 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if you're relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	118.35	
90th Percentile	114	
85th Percentile	107	
80th Percentile	105	
75th Percentile	101.75	
70th Percentile	99	
65th Percentile	97	
60th Percentile	94	A-/B+ Boundary
55th Percentile	91.15	
50th Percentile	89	
45th Percentile	87	
40th Percentile	84	
35th Percentile	80.55	
30th Percentile	76.9	B-/C+ Boundary
25th Percentile	73	
20th Percentile	69.6	
15th Percentile	64.95	C-/D+ Boundary
10th Percentile	57.3	
5th Percentile	45	
0th Percentile	6
