

16A Midterm 2 Statistics (001)

Here are the basic statistics from the second midterm. The table shows the scores at each percentile boundary. For example the 60th percentile is 108/125. This means that 40% of the class received 108 or above. The 50th percentile is where the median is, so exactly half the class scored 101.5 or above. Also indicated are the rough grade boundaries if your grade was to be decided on this test alone.

Remember your final letter grade is only determined once all your scores have been compiled so don't take these predictions too seriously. As indicated in the course policy if your relative score in the final (i.e the percentile) is higher than your relative score in the lowest midterm it will replace it in your final grade computation.

100th Percentile	125	
95th Percentile	125	
90th Percentile	120	
85th Percentile	118	
80th Percentile	116	
75th Percentile	114.75	
70th Percentile	112	
65th Percentile	110	
60th Percentile	108	A-/B+ Boundary
55th Percentile	104.75	
50th Percentile	101.5	
45th Percentile	98	
40th Percentile	96	
35th Percentile	92	
30th Percentile	88	B-/C+ Boundary
25th Percentile	85	
20th Percentile	79	
15th Percentile	70.75	C-/D+ Boundary
10th Percentile	65	
5th Percentile	59.25	
0th Percentile	0
